

GIW PRODUCT IMPROVEMENTS- 2001

Technical Bulletin TB200101

LCC Series Slurry Pumps

Reinforced Suction Liner

LCC rubber lined pumps now have a reinforced suction eye. This feature is available on the LCC 16, 20, 24, 26 and 28. The reinforcement minimizes the potential for liner collapse or fluttering during pump operation.

Split Stuffing Boxes

Split stuffing boxes are available for the 70mm, 100mm and 125mm shafts. This feature improves ease of installation and maintenance. Solid stuffing boxes with split wear plates are also an option for all pumps.

Stuffing Box Lantern Ring/Throat Bushing

For applications where the 1st ring of packing can be eliminated, a throat bushing is available. This bushing will take the place of the standard lantern ring and the 1st packing ring.

Casing Liner

To enhance product identification all liners are now gray instead of tan in color. The liner is still made of pure gum rubber and continues to provide high resistance to abrasion due to its exceptional resilience properties.

Constant Level Oiler

No longer a standard option for LCC pumps. There are very few requests for this option and problems have been encountered due to overfilling the unit.

LSA S Series Slurry Pumps

Phase II/Phase IV

All tests on Phase II (core product range) will be completed this year. Complete design of hydraulics and standardization of the shell thickness for Phase IV (expanded product range) will be completed this year.

Testing for Phase IV will be completed next year. Through these efforts, the efficiencies of most pumps will improve.

Mega Slurry Pump

The Mega Slurry is ready for market. This high performance, low maintenance pump is designed specifically to handle light to medium slurries. The Maintenance Manual and Product Introduction have been updated and are available from the GIW Marketing Department.
